PRODUCT DESCRIPTION

GRAY SILICONE FOAM HEAT CONDUCTIVE PAD FOR DYE SUBLIMATION

Essentialware's Gray Silicone Foam Heat Conductive Pads are used in dye sublimation to help evenly distribute pressure and protect materials in the sublimation process. Can be used in most industrial applications with Porcelain, Glass, Stone Tile, Glass cutting boards, metal, wood, and other delicate materials. Make sure to adjust pressure for pad and material thickness.

The cost-effective sublimation alternative to Green Pads from Geo Knight.

GRAY SILICONE FOAM HEAT CONDUCTIVE PAD FEATURES & BENEFITS

- Gray Silicone Foam used in sublimation process for delicate materials such as tile, wood, metal, porcelain, glass cutting boards, and more
