PRODUCT DESCRIPTION

PTFE NON-STICK HEAT CONDUCTIVE PADS | 9" X 5"

Essentialware's Green Silicone Rubber Heat Conductive Pads are used to help evenly distribute pressure and protect materials in the sublimation process.

TIPS FOR A BETTER TRANSFER

1. Remember to **adjust your heat** press pressure to accommodate for the pad and material you're transferring to
2. Begin every press with a **fresh transfer sheet**
3. **Tape down** your image so you don't get a duplicate image, known as **ghosting**
4. Remove the transfer in **one quick, fluid motion**
