### PRODUCT DESCRIPTION

Essentialware's Green Silicone Rubber Heat Conductive Pads are used to help evenly distribute pressure and protect materials in the sublimation process.

### TIPS FOR A BETTER TRANSFER

1. Remember to **adjust your heat** press pressure to accommodate for the pad and material you're

transferring to

2. Begin every press with a **fresh transfer sheet**

3. **Tape down** your image so you don't get a duplicate image, known as **ghosting**

4. Remove the transfer in **one quick, fluid motion**
