

PTFE coatings were being examined for possible harmful effects at a time when they were produced using either PFOA or PFOS, which are part of a larger group of chemicals called per- and polyfluoroalkyl substances (PFAS).

PTFE fabrics converted by and distributed through Essentialware have been tested as having no detectable amount of PFOA – Perfluorooctanoic Acid as shown in the following test result.

## TEST REPORT

Reference No. : TRHZ1312141

Date : Dec. 17, 2013

Page No. : 2 of 3

### TEST RESULT:

Test Items	Unit	MDL	Test Result <sup>▲</sup>
Perfluorooctanoic Acid (PFOA)	%	0.0001	N.D.

- Note :**
- 1) MDL = Method Detection Limit.
  - 2) N.D. = Not detected, less than MDL.
  - 3) % = Percentage by weight.
  - 4) <sup>▲</sup>As specified by client, the sample was tested in mixture.

Tested Material: PTFE coated fabric
